G I G

DESIGNED BY
SÉRGIO BATISTA

The simplicity of the shapes of the Gig Hanging Chair is in its pure and elegant lines. The nautical rope that interweaves throughout structure and supports the hanging chair is a reminder of a sea breeze on a warm summer day.

COMFORT SYSTEMS

The comfort system of foam are composed by different densities and foam types, providing a great weight support and good resilience. Sometimes it can also include a molded piece of layer glued that helps to achieve a better comfort. All the foams are produced with high quality, proven efficiency and the best part: Ecologically right (low CFC emission).

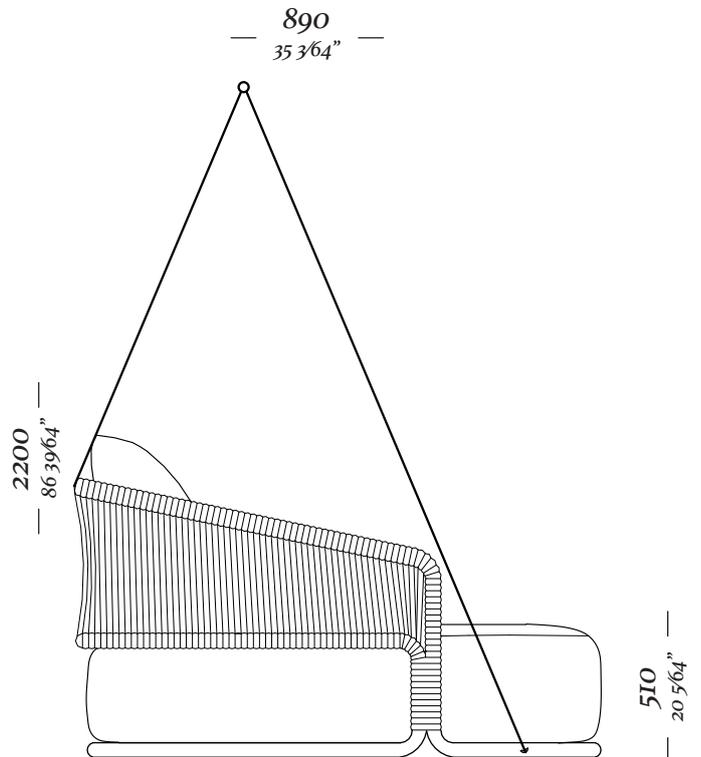

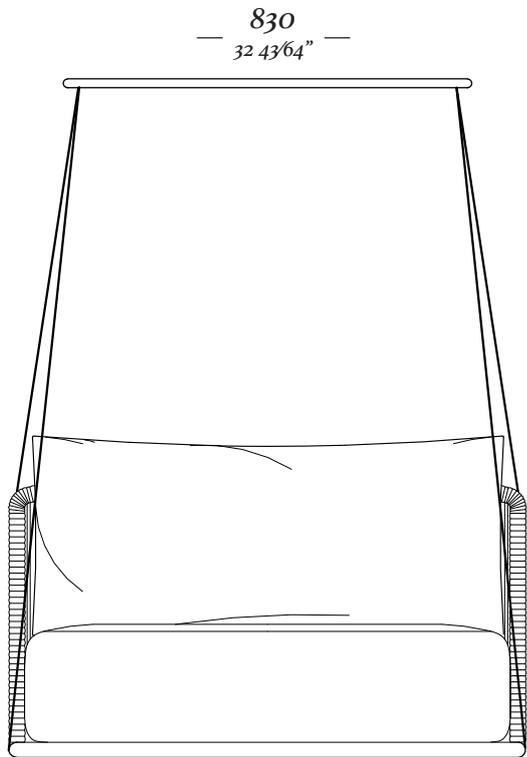

STRUCTURE

Hanging chair with an aluminum metal structure fixed with welding and metal rivets ensures the resistance and stability of the product and avoids creaking and imperfections.

The seat consists of layers of soft foam wrapped with an ecosoft foam layer, ensuring softness and is soft to the touch, providing a unique feeling of comfort and coziness when sitting. The backrest cushion is filled with polyester fiber that is velvety and soft to the touch, for better gliding and is easy to handle.

FINISHES/ COVERING

Finishes and coverings available according to the price list. It is a wide variety of finishes and coverings to compose unique pieces.
